

🚀 AI-DRIVEN APP VIRALITY

GrowthKit

The Self-Assembling AI Growth Engine for Apps

One line of SDK code • Zero ad budget • Exponential user scale

Why Good Apps Die Quietly

90%

3-Month Churn Rate

The average abandonment rate due to zero user discovery.

The Distribution Bottleneck

Ads are a rich team's game: Skyrocketing customer acquisition costs (CAC) have completely priced out indie creators and small teams.

Bought vs. Earned attention: Today's mobile ecosystem rewards the size of your marketing budget, not the quality of your software.

Zero growth infrastructure: Developers build beautiful products but lack the specialized marketing resources to construct complex referral funnels.

Viral Loops in One Line of Code

Free, Built-In Organic Growth

Install, Deploy, Forget: Add a single dynamic SDK script tag to instantly activate tailored, high-converting referral loops within your app interface.

Zero Ad Budget Required: Transform existing users into organic brand advocates, completely bypassing reliance on expensive paid networks.

Dynamic UX Adaptation: Growth mechanics overlay natively onto your interface without needing painful store updates or fresh app releases.

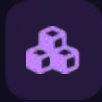

The Three Layers of GrowthKit

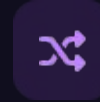

1. AI Director

Deeply analyzes your app's niche, target demographic, and launch status to design the perfect, high-conversion growth blueprint.

2. Auto-Assembly

Our dynamic SDK compiles the layout automatically using pre-built UI block elements. Zero developer overhead, zero app store reviews.

3. Auto-Optimizer

Continuously A/B tests configurations, messaging, and CTA elements in real-time, instantly routing traffic to the highest-converting variant.

Battle-Tested Growth Blocks

Achievement Sharing: Instantly generates beautiful, shareable milestone cards that users proudly post to social feeds (like Strava).

"Made with" Watermarks: Inserts elegant, organic brand footprints that trigger curiosity and high-conversion loops (like Gamma).

Dropbox-Style Invites: Dual-sided referral incentives and premium feature unlocks triggered natively when users invite colleagues.

Waitlist Queues: Generates highly viral waiting queues, motivating early adopters to refer friends to skip the line (like Robinhood).

One Code. Distinct AI Decisions.

Context-Aware Reasoning

To prove the AI genuinely reasons, we tested the identical line of code across two highly polar-opposite applications:

FitTrack (Live Fitness App)

The AI evaluated live user habits and assembled: **Achievement Share Card + Dual-Sided Referrals.**

GuardianSOS (Safety, Pre-launch)

The AI recognized it was unreleased and assembled: **Contact Importer + Waitlist Gamification.**

 Peak PNO	54
 Total PNO	65-75
 Peak UO2	91%
 Total UO2	61

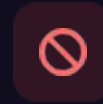

How It Integrates (No Magic Tricks)

What We Actually Do

Dynamic Layout Injection: Our lightweight SDK acts as an overlay container, injecting secure UI modules based on dynamic configuration instructions.

Server-Side Configuration: Loops are toggled, modified, and adjusted instantly via backend commands, avoiding client-side lag.

What We Never Do

No Source Code Mutating: The AI never writes code back into your app repository or modifies pre-compiled code files.

No Store Review Hurdles: Bypasses Apple & Google's multi-day review queues because we alter dynamic configs, not binary assets.

The Exponential Growth Formula

$$K > 1.0$$

The Virality Coefficient

When 1 user brings in more than 1 user, growth compounding becomes exponential.

Our Business Advantage

Smarter and Cheaper: Branch and AppsFlyer are worth billions, but they only **count** referrals. We actively **engineer** and optimize the loop dynamically.

Replacing the Growth Team: Commercial apps pay a subscription, saving them the \$250k/year cost of a dedicated growth marketing department.

Highly Scalable SaaS: Zero marginal delivery cost—the AI manages optimization, scaling our margins with every client app.

The GrowthKit Social Flywheel

Democratizing Growth

100% Free for Social Good: We provide educational, non-profit, and civic-tech apps with free access to our premium loop SDK forever.

Smarter Core Engine: The more varied apps we run, the faster our AI models learn which loops yield the highest conversions.

The Double Flywheel: Social impact apps gain corporate-grade virality features, while their usage feeds valuable data back into making our commercial software smarter.

Working Code. Real Prototype.

What is Live Right Now:

Active SDK Orchestrator: Real-time loop rendering across 2 live test applications.

AI Director Service: Live LLM-powered context analyzer reading meta tags and formulating loops.

Performance Dashboard: Monitors real-time K-factor, automated A/B test branches, and ad budgets saved.

THE IMPORTANCE OF IN-DEPTH ANALYTICS FOR MOBILE GAMES
